Additional usage is \$6.30/MB

Standard IP (also called Background IP or BIP) is the primary high speed internet service needed by most users. It is a shared bandwidth data transfer service without a minimum data rate guarantee. It is used in applications such as email or web browsing where low cost is more important than guaranteed data rate.

PREMIUM DATA SERVICES	Per Min
32 kbps streaming IP	\$2.25
64 kbps streaming IP	\$5.90
ISDN to PSTN	\$5.50
128 kbps streaming IP	\$11.20
256 kbps streaming IP	\$19.90

Premium Data Services: These include Streaming IP and ISDN services which are expensive and billed on a per minute of connection time basis and have limited application for most users. For this reason, they are disabled by default on most plans. *ISDN* includes 56 or 64 kbps circuit-switched data or 3.1 Khz audio calls. *Streaming IP* service has a guaranteed minimum data rate (on the space leg) and is used for applications such as video conferencing where guaranteed data rate is critical. The maximum streaming IP rate is determined by the class of the terminal, e.g. Class I or II terminals do not support 256 kbps. *Last Mile Services:* Streaming IP guarantees a data rate from the BGAN terminal to the POP, at which point the data stream is carried to the final destination IP address via the internet (default choice), or a dedicated line, or TAN (Terrestrial Access Network which uses on-demand ISDN). No data rate can be guaranteed over the internet. Dedicated lines or TAN guarantee a data rate from the POP to destination IP address, but are optional services with additional cost.

Basic Rate Voice services include calls to PSTN numbers, calls to GSM/cellular numbers, calls to other BGAN terminals or to your own BGAN voicemail. Other types of voice calls such as calls to other satellite networks are not basic rate voice services and are billed at higher rates. Billing Increments: Customer must pay for all data and calls sent or received through the BGAN terminal. Background IP access sessions are billed in 50 KB increments with a 50 KB minimum per "session CDR"; a session CDR is generated for every 2 MB of usage or every 12 hours of connection time, whichever comes first. Voice, ISDN & Streaming IP services are billed in 15 second increments with a 30 second minimum per call.

Annual plans: Annual Plan fees and option fees are billed one year in advance from the date of activation. Customer will receive a bill only for months in which services not covered by the usage bundled with the plan occur. At the end of each term, there is an automatic charge of the plan's Annual Fee covering a new 12-month term and including the bundled usage indicated for that specific plan.

No Rollover: Unused voice minutes or megabytes of data transfer bundled within a monthly fee (or an annual fee) cannot be rolled over to a subsequent month (or year) if they are unused; there will be no refund or pro-ration. Limitations and other Terms & Conditions: All BGAN equipment does not support every service type.

Scratch & Web plans: Scratch & Web rate plans support BIP controlled by prepaid Scratch & Web user account(s). Other service types (voice, streaming IP, and ISDN) are billed on a monthly postpaid basis. Customers not wanting postpaid billing of some or all of these other services may block some or all of them at the network level. By default voice is allowed and streaming IP and ISDN are blocked.
